

## Insurance Verification/Eligibility:

If your insurance verification/eligibility solution runs in batch mode prior to appointments AND integrates or interfaces the batch results into your PM System, then OTech will read into the PM System to read the batch results. OTech will then handle patients according to our client's directions based on the batch results.

OTech offers real time insurance verification/eligibility during the patient check-in process. OTech passes the insurance information that already resides in the PM System to an OTech partner of our clients choosing: Navicure, Availity, InstaMed, Experian (formerly MPV), Greenway Clearinghouse Services and NextGen Healthcare RTS. The partner runs the real time insurance verification/eligibility and OTech reads the result and will handle the patients according to our client's directions.
